## MS 0452 MacDougal, Daniel Trembly, 1865-1958 Papers, 1889-1938 (bulk 1903-1915)

## **DESCRIPTION**

Correspondence and photographs relating to botanical and related research by Daniel T. MacDougal and other researchers at the Desert Botanical Laboratory. Correspondence with colleagues is about their research and professional associations. Photographs relate to western deserts particularly southern Arizona, the Colorado Delta, and the Salton Sea.

45 boxes, 26 linear ft.

### RELATED MATERIAL

Related collection at the University of Arizona, Special Collections Library, Carnegie Institution of Washington, Desert Botanical Laboratory Collection, AZ 356.

## **ACQUISITION**

Photo albums donated by D. T. MacDougal, 1957-1958. California series of photos donated by Desert Botanical Laboratory, Phoenix, 1998. Other photos donated anonymously in 1990.

## **ACCESS**

There are no restrictions on access to this collection.

## **COPYRIGHT**

Requests for permission to publish material from this collection should be addressed to the Arizona Historical Society - Tucson, Archives Department.

## **PROCESSING**

The collection was processed by Kim Frontz, June 1999.

### **ARRANGEMENT**

Four series: Correspondence, 1889-1927. Manuscripts, etc., 1903-1940. Photographs, ca. 1903-1932. Photograph albums, 1903-1915.

## **BIOGRAPHICAL NOTE**

Botanist and Director of Carnegie Institution, Department of Botanical Research. The department included the Desert Botanical Laboratory, established in Tucson, Arizona in 1903, and the Coastal Laboratory, established in Carmel, California in 1908. MacDougal was

born in Indiana in 1865, received a B.S. degree from DePauw University in 1890, an M.S. in 1894, and an LL.D in 1912. He also earned a M.S. degree from Purdue University in 1891 and a Ph.D. in 1897. He worked with the U.S. Dept. of Agriculture in Arizona and Idaho, 1891-1892; married Louise Fisher in 1893; was Assistant Director of the New York Botanical Garden, 1899-1905; and director of the Dept. of Botanical Research of the Carnegie Institution from 1905 to 1933.

MacDougal, along with Frederick V. Coville, chief botanist of the U.S. Dept. of Agriculture, founded the Desert Botanical Laboratory in Tucson in 1903 to research desert plant life. In 1907, MacDougal organized the Pinacate Expedition into the lava fields of Mexico accompanied by Godfrey Sykes, William T. Hornaday, Jeff Milton, and others. Another expedition, in 1912, took MacDougal and Godfrey Sykes to the Libyan Desert on camel back to investigate desert conditions.

MacDougal was internationally known in the scientific community; was a prolific author in his field; was active in numerous professional organizations; and was part of a literary and amateur theatrical group in Carmel that included writer Mary Austin. He died in Carmel, California in 1958.

### SCOPE AND CONTENT NOTE

Chiefly correspondence and photographs relating to MacDougal's work and his colleagues' work in the field of botany. The correspondence (29 boxes) is mostly between MacDougal, his associates at the Laboratories, and members of the national scientific communities involved in botanical and related research. Correspondents discuss their research, appointments of colleagues, and administrative issues.

There is correspondence relating to the Pinacate Expedition, 1907 (f.97), and to Salton Sea explorations, 1909-1915 (f.152). Correspondence is present from MacDougal's involvement in the formation of the Pacific Division of the American Association for the Advancement of Science, 1913. During 1917 to 1918, the correspondence is not so much about research as about World War I and the resulting lack of resources and involvement in civil defense organizations. There is correspondence relating to MacDougal's involvement with the Arizona Council of Defense and letters from R.B. von Kleinsmid (f.347) discussing the effect of the war on the University of Arizona. Most of the correspondence from 1920 to 1927 relates to MacDougal's role as secretary of the American Association for the Advancement of Science.

Correspondents within the scientific community include Joseph N. Rose, William A. Cannon, N.L. Britton, Frederic E. Clements, Burton E. Livingston, William T. Hornaday, Forrest Shreve, Francis Lloyd, W.L. Tower, Ellsworth Huntington, and many others. Other significant correspondents include Godfrey Sykes, Mary Austin, Frederick S. Dellenbaugh, Gifford Pinchot, and Charles Lummis. Correspondents of local interest include William P. Blake, Hiram Fenner, Sharlot Hall, Rev. Henri Granjon, G.E.P. Smith, George Parsons, John Spring and the Chamber of Commerce.

Photographs depict plant life in geographical areas of research including southern Arizona, Colorado Delta, Salton Sea, Mohave Desert, White Sands, N.M., and Mexico. There are photographs of researchers at work, experiments, and cacti. Although the photographs

chiefly document plant life there are some images of people, towns and other subjects; these are noted in the box and folder list. Highlights are the building of the laboratory, views of Tucson from Tumamoc Hill, the Santa Catalina Mountains, scenes of northeastern Tucson including Agua Caliente, Soldier Trail, and Tanque Verde Creek, demonstrations of extracting juice from cacti, and various Indian huts.

Note on arrangement: The correspondence is arranged by year, then within each year it is alphabetical by correspondent. In a very few cases, correspondence has been kept by subject such as f. 248 on eugenics and f. 363 on Spanish influenza. The photographs mostly follow the original order of MacDougal. There are loose photos and scrapbooks and there is some overlap. There are photographs in both series that are duplicates but there are also photographs in each series that are not duplicated.
